

Air Broadband

Superfast Broadband for Rural Communities

Can your community become an Air Broadband Community?

Broadband is an essential service these days, and we believe everyone should have superfast, ultra reliable fibre-optic based broadband to their property. If you live in a town or city, then odds are you already have this. But for many rural communities, it's simply not possible with the legacy copper-based infrastructure that nearly all providers rely on.

Air Broadband is different—we install our own wireless infrastructure, coupled to our ultrafast fibre network, giving speeds up to 30Mbps for residential customers, and more for businesses. We only provide services to rural communities, and usually only as a community project.

If you can answer one simple question, then you might be able to get Air Broadband. Can you get thirty people to sign up for our service in advance? Our investment in building new networks is based on demand and must start with thirty people as a minimum to make it viable.

We will work with you and your community, ideally with a community broadband group to measure the level of interest and see if your community can become an Air Broadband Community. We are happy to help your local community, the Parish, District and County Council by holding community events and campaigns, where we answer any questions about the technology, how it works and what the impact will be. We are honest and open in all our communications so you can sign up with confidence to our service, and trust in us to get you the internet service you need.

We take no money from anyone until they're up and running, and offer everyone a 14 day complete moneyback guarantee - if you're unhappy with our service for whatever reason, we'll refund all money paid and take our kit away. That's how confident we are in our service - and we want to give you that confidence to sign up with us, and help yourself and your neighbours to get superfast broadband. Call
